AZ CORP COMMISSION  
DOCUMENT CONTROL

IN THE MATTER OF THE APPLICATION OF  
ARIZONA-AMERICAN WATER COMPANY,  
AN ARIZONA CORPORATION, FOR A  
DETERMINATION OF THE CURRENT FAIR  
VALUE OF ITS UTILITY PLANT AND  
PROPERTY AND FOR INCREASES IN ITS  
RATES AND CHARGES BASED THEREON  
FOR UTILITY SERVICE BY ITS PARADISE  
VALLEY WATER DISTRICT

DOCKET NO. W-01303A-05-0405

IN THE MATTER OF THE APPLICATION  
OF ARIZONA-AMERICAN WATER  
COMPANY, INC., AN ARIZONA  
CORPORATION,  
FOR APPROVAL OF AN AGREEMENT  
WITH THE PARADISE VALLEY COUNTRY  
CLUB

DOCKET NO. W-01303A-05-0910

**BRIEF OF COMMISSION STAFF**

**I. INTRODUCTION**

The Arizona-American Water Company ("Arizona-American Water" or the "Company") is the largest, investor-owned water utility in the State of Arizona. It serves approximately 131,000 customers throughout the state. The Paradise Valley Water District (hereinafter referred to as "Arizona-American PV" or "Company") serves approximately 4,737 metered customers, 93% of which are residential customers living in the Town of Paradise Valley (the "Town" or "Paradise Valley"), Scottsdale and some unincorporated areas of Maricopa County.

...

...

1 This is the Arizona-American PV's first rate case in approximately seven years. The parties  
2 have been able to resolve a lot of their differences throughout the course of this proceeding.  
3 However, as will be discussed, several rate base, revenue requirement and rate design issues remain.

4 Staff is recommending that the Commission adopt an Original Cost Rate Base ("OCRB") of  
5 \$14,412,903.00. The filed adjusted test-year rate base was \$11,651.216. Staff and the Company are  
6 now in agreement with Staff's final recommendation of \$14,412,903. The Residential Utility  
7 Consumer Office ("RUCO") takes issue with inclusion of fire flow investment in rate base. Other  
8 issues that remain in dispute between the parties and which are discussed herein include (1) the  
9 inclusion of backup pumping equipment in rate base, (2) refund of the after tax gain on the sale of  
10 property by the Company, and (3) whether the Arsenic Cost Recovery Mechanism ("ACRM")  
11 provides sufficient due process for including arsenic remediation projects in rate base for the Step  
12 One Surcharge.

13 The most significant issue in dispute in the case is whether the Commission should allow  
14 recovery of investments made by the Company relating to fire flow improvements. Several parties  
15 testified that the Town of Paradise Valley's fire flow Ordinance was precipitated by a fire and  
16 resulting health and safety concerns of the Town.

17 The Ordinance enacted by the Town of Paradise Valley brings its fire flow standards up to  
18 Uniform Fire Code standards, based upon recommendations of a Task Force comprised of Town  
19 Officials, Company representatives and Town residents. The Town would like the project completed  
20 in a five year time-frame, but has apprised the Commission it cannot legally fund the project itself.  
21 To-date the Company has invested slightly over \$4 Million in fire flow improvements. Arizona-  
22 American PV estimates the fire-flow improvements to cost up \$16 Million. RUCO argues that the  
23 Town should fund fire flow improvements itself and that it has the legal ability to do so. However,  
24 to-date RUCO has offered no support for its position regarding the legal ability of the Town to fund  
25 these improvements which would inure to the benefit of a private entity. The Town has filed a letter  
26 in the docket stating that it cannot legally fund the projects. In addition, to the extent the  
27 Commission authorizes the recovery of fire flow investment, a remaining issue in dispute is how  
28 these improvements should be recovered.

1 Staff is recommending that the Commission adopt an annual revenue requirement of  
2 \$5,333,359 and annual operating expenses of \$3,689,911. Staff's proposed revenue requirement is  
3 \$5,333,359 based on a Rate of Return ("ROR") of 7.24%. The Company, on the other hand is  
4 recommending an annual revenue requirement of \$5,511,451 based on a rate of return of 7.84%.

5 The most significant revenue requirement issue that remains in dispute is the Company's  
6 proposed rate of return on equity ("ROE"). The Company hired two outside experts to support its  
7 proposed ROE. However, the particular methodology that the experts are urging the Commission to  
8 adopt has been rejected by virtually every regulatory body that has considered it. The proposed  
9 methodology results in a ROE two percentage points higher than that produced under well recognized  
10 and accepted methodologies that are now used by most regulatory bodies in the United States. The  
11 Commission should reject the Company's proffered methodology which Staff believes is designed to  
12 give it an inflated return at the expense of ratepayers.

13 Finally, the parties also differ on the amount the Company should be authorized for rate case  
14 expense. Staff's Brief will also discuss this issue.

## 15 **II. DISCUSSION**

### 16 **A. Rate Base Issues**

#### 17 **1. Staff Recommends that the Commission Adopt an Original Cost 18 Rate Base of \$14,412,903.**

19 The Company proposed that its adjusted test-year rate base be used as its OCRB.<sup>1</sup> The filed  
20 adjusted test-year rate base was \$11,651,216. Staff recommended several adjustments to the  
21 Company's adjusted OCRB. Staff withdrew some of the adjustments after further explanation from  
22 the Company.<sup>2</sup> The Company accepted other adjustments,<sup>3</sup> and agreed with Staff's final  
23 recommendation of \$14,412,903 for OCRB.<sup>4</sup>

24 ...

---

25 <sup>1</sup> Ex. A-19 at 5: 6-15.

26 <sup>2</sup> Tr. at 480:11-16 (Staff withdrew its recommendation to eliminate \$90,286 in deferred maintenance. The  
27 Company provided evidence that it is industry practice to defer costs for tank painting. See Ex. S-2 at 5).

28 <sup>3</sup> Ex. A-15 at 9:11-19 (Company accepted Staff's adjustment of \$107,315 for accumulated depreciation.);  
Tr. at 266:15-17 (Company accepted Staff's recommendation of zero cash working capital.).

<sup>4</sup> See Ex. A-34 at 1 and Ex. S-15 at 2.

1 RUCO had a final recommendation of \$10,809,498 for the adjusted test-year rate base.  
2 RUCO included five adjustments that were not accepted by the Company or Staff.<sup>5</sup> Four rate base  
3 issues are discussed in greater detail below. With the exception of one adjustment, RUCO's  
4 adjustments are discussed in the four issues.<sup>6</sup>

5 **2. Certain Fire Flow Projects Should Be Included in Rate Base at this**  
6 **Time and Other Projects and Costs Should be Deferred Using the**  
7 **Accounting Order.**

8 Staff's largest adjustment was for plant placed in service for public fire safety ("fire flow"  
9 projects). The Company incurred \$3,018,867 for fire flow projects by the end of the test year. The  
10 costs were incurred for the Jackrabbit/Invergordon Water Main Replacement Project  
11 ("Jackrabbit/Invergordon Mains") and for the McDonald Drive Main Extension Project ("McDonald  
12 Mains").<sup>7</sup>

13 Company witness Joseph E. Gross testified that the Jackrabbit/Invergordon Mains were  
14 placed in service in March 2005.<sup>8</sup> Mr. Gross also testified that the McDonald Drive Mains would be  
15 in service in 2005. The McDonald Drive Mains were in service when Staff Engineer John A. Chelus  
16 conducted a field inspection on October 6, 2005.<sup>9</sup>

17 Staff recommended that the \$3,018,867 for post-test year plant be included in rate base at this  
18 time.<sup>10</sup> The Company accepted Staff's recommendation but,<sup>11</sup> RUCO did not.<sup>12</sup> RUCO recommends  
19 that costs incurred for fire flow projects not be included in rate base now or in the future. RUCO  
20 takes the position that the projects should be funded by contributions in aid of construction by the  
21 Town of Paradise Valley.<sup>13</sup> RUCO's position is addressed in the section on fire flow projects rather  
22 than this section on rate base.

23 <sup>5</sup> See RUCO final Schedule TJC-2 (filed April 21, 2006).

24 <sup>6</sup> RUCO adjustment number 4 is for negative \$61,432 for cash working capital. Although Staff recognized  
25 that most sophisticated companies have a negative cash working capital, Staff recommended a zero cash  
26 working capital. See Ex. S-1 at 6:9-21.

27 <sup>7</sup> Ex. A-7 at 7.

28 <sup>8</sup> *Id.*

<sup>9</sup> Ex. S-5 at 7.

<sup>10</sup> Ex. S-1 at 5:1-6.

<sup>11</sup> Ex. A-15 at 8:11-17.

<sup>12</sup> See RUCO's Schedule TJC-2, adjustment numbers 5 and 6.

<sup>13</sup> See Ex. R-11 at 11:1-10; see also Tr. at 407:19-23.

1 Staff's recommendation was based upon its determination that the projects were revenue  
2 neutral and did not materially reduce operating expenses.<sup>14</sup> Staff also wanted to encourage  
3 improvement in public fire safety, and to minimize deferral of costs pursuant to the Accounting Order  
4 adopted by the Commission in Decision No. 68303.<sup>15</sup>

5 In its rebuttal testimony, the Company proposed to include an additional project in rate base  
6 and additional costs related to the Jackrabbit/Invergordon Mains and McDonald Drive Mains.<sup>16</sup> The  
7 additional project is the Nauni Valley Drive Project and was placed in service on January 3, 2006.<sup>17</sup>  
8 Company witness Joel Reiker testified that the additional costs were for work orders that closed "in  
9 the weeks after those projects were placed in service on October 6, 2005."<sup>18</sup>

10 In his surrebuttal testimony, Staff witness James Dorf recommended excluding the additional  
11 project and costs in rate base at this time.<sup>19</sup> Mr. Dorf cited Commission Decision No. 61831 in  
12 support of its recommendation. Decision No. 61831 states that:

13 In order to allow Staff and intervenors an adequate time to review and  
14 audit any such adjustments, the Company shall limit its adjustments to  
15 add post-TY plant to include only plant that is used and useful and in  
service within 90 days of the date that the rate application is deemed  
sufficient.<sup>20</sup>

16 Mr. Dorf testified that Staff filed a sufficiency letter on July 18, 2005. He also testified that the  
17 additional project and costs did not satisfy the 90-day requirement in Decision No. 61831.<sup>21</sup>

18 During the hearing, Company witness Joel Reiker offered a new position accepting deferral  
19 for the additional project and costs pursuant to the existing Accounting Order.<sup>22</sup> Mr. Dorf also  
20 testified that the existing Accounting Order could be used for deferral of the additional project and  
21 costs.<sup>23</sup>

28 <sup>23</sup> Tr. at 488:9-14.

1 a. The Commission should allow for recovery of investments related  
2 to fire flow which are prudently incurred and used and useful.

3 1. The Company's investment in PSF is being made to comply  
4 with a Town of Paradise Valley Ordinance and is supported  
5 by the Town.

6 Section 13-1-13 of the Town Code establishes the minimum fire flow from all hydrants in the Town  
7 at 1,500 gallons per minute or 5,678.1 liters per minute.<sup>24</sup> This is also consistent with the fire flow  
8 requirements of the Town of Scottsdale.<sup>25</sup> In a letter to Chairman Hatch-Miller dated February 15,  
9 2006,<sup>26</sup> Town Manager Thomas Martinsen stated the following:

10 From the town's perspective each of the three water utilities serving our  
11 residents must utilize whatever mechanisms they have to find [sic]  
12 improvements which are necessary for public safety. The Town, like  
13 other Arizona municipalities, has adopted the Uniform Fire Code which  
14 specifies minimum flow rates necessary for different types of  
15 development. A minimum fire flow of 1500 gallons per minute is the  
16 standard which all three water utilities must meet within the Town.

17 The project, while costly, has the support of the Town and this initiative was begun at the  
18 grass roots level according to Town Manager Thomas M. Martinsen:

19 Actually, the water system improvement plan designed to provide  
20 adequate fire flows began at the grass roots level by Town residents  
21 who were aware throughout the process that the cost of the  
22 improvements would need to be supported by rates.<sup>27</sup>

23 The Town formed a Task Force comprised of City officials, City residents, and Company  
24 representatives. The Task Force investigated the need for improving fire flows in Paradise Valley,  
25 and held public meetings on how to implement a plan of improvement.<sup>28</sup> The Town determined that  
26 the improvements should be completed in a five year time-frame.<sup>29</sup> A fire in Paradise Valley was  
27 one of the precipitating events that led to the Town's adoption of the new fire flow standard or  
28 ordinance.<sup>30</sup>

29 ...

30 <sup>24</sup> Ex. S-11.

<sup>25</sup> Tr. at 185:11-14.

<sup>26</sup> Ex. A-29.

<sup>27</sup> *Id.*

<sup>28</sup> Tr. at 118:12-17.

<sup>29</sup> Ex. A-29 at 1.

<sup>30</sup> Tr. at 176:8-9, 448:14-20; Ex. A-4 at 3:6-10.

1 Much of the infrastructure in Paradise Valley was constructed 40-50 years ago according to  
2 Company representatives.<sup>31</sup> Sizing the system to meet this new fire flow standard could, therefore,  
3 ultimately cost up to \$16 Million.<sup>32</sup> According to both the Company's testimony<sup>33</sup> and the City's  
4 letter to the Commission, the citizens of Paradise Valley<sup>34</sup> support this undertaking. The citizens are  
5 also willing to pay higher rates to Arizona-American Water to put the necessary infrastructure in  
6 place.

7 Notwithstanding the support underlying the Task Force and Town Council's position, several  
8 Scottsdale residents offered public comment in opposition to the fire flow project, arguing that it  
9 would not benefit them. However, Company witness Townsley testified that improvements in fire-  
10 flow will assist all customers who are part of an interconnected grid.<sup>35</sup> The Scottsdale and Paradise  
11 Valley systems are not separate systems but are all interlinked together as an interconnected grid.<sup>36</sup>  
12 So a benefit in one location is a benefit to all locations.<sup>37</sup> Several Scottsdale residents appeared to be  
13 confusing fire flow with water pressure, and then opposing the improvements because they had  
14 adequate "water pressure." Company Witness Townsley testified that fire flow can be insufficient  
15 even if water pressure is sufficient.<sup>38</sup>

16 The need for this investment was, however, best expressed in the Commission's Fire Flow  
17 Accounting Order:<sup>39</sup>

18 The Town of Paradise Valley ("Town") has requested the fire-  
19 flow improvements since they are needed to reduce the risk to  
20 life and property. Mr. Thomas M. Martinsen, the town manager  
21 of the Town has requested expedited review. Town residents'  
safety and the protection of their property are highly dependent  
on this program.

<sup>37</sup> *Id.*

27 <sup>38</sup> Tr. at 115:14, 135:13-136:18.

28 <sup>39</sup> *In the Matter of the Application of Arizona-American Water Company, Inc. 's Request for an Accounting  
Order Authorizing the Deferral of Costs Associated with Public Safety/Fire Flow Improvements in its  
Paradise Valley Water District*, Docket No. W-01303A-05-0704, Decision 68303 (November 14, 2005).

1 Decision 68303 at 1.

2                                   2.     The Town asserts that it cannot legally fund the fire flow  
3   investments; and thus citizens of Paradise Valley may be left  
4   without adequate fire flow protection without the  
5   Commission's allowance and recognition of these costs.

6                   The Town Manager Martinsen's letter contains the Town's legal opinion that it cannot fund  
7 the fire flow improvements.

8                   The Town government cannot, for both statutory and public policy  
9 reasons, fund water system improvements for a private utility. The  
10 Town is not a water utility. Town residents are served by three water  
11 utilities, Arizona-American, Berneil Water Company and the City of  
12 Phoenix. Each of these utilities is responsible to make the necessary  
13 improvements within their respective service area, and to not only meet  
14 public health standards, but to meet fire safety standards prescribed by  
15 the Uniform Fire Code as well.

16                   Fortunately, all three water utilities are moving forward with necessary  
17 improvements. Legally, the Town is not a water utility and could not  
18 spend public money on water system improvements without the vote of  
19 the people. From a public policy perspective the Town could not  
20 subsidize a private business with public money. Both A.R.S. Section  
21 9-514 and the Gift Clause in the Arizona Constitution prohibit the  
22 Town from spending general fund money to build or contribute to the  
23 construction of the water system infrastructure that would be owned by  
24 Arizona American.<sup>40</sup>

25                   The Gift Clause, Article 9, Section 7 of the Arizona Constitution provides as follows:

26                   Neither the state, nor any county, city, town, municipality, or other  
27 subdivision of the state shall ever give or loan its credit in the aid of, or  
28 make any donation or grant, by subsidy or otherwise, to any individual,  
association, or corporation, or become a subscriber to, or a shareholder  
in, any company or corporation, or become a joint owner with any  
person, company, or corporation, except as to such ownerships as may  
accrue to the state by operation or provision of law or as authorized by  
law solely for investment of the monies in the various funds of the  
state.

29                   There is a large and complex body of case law interpreting the Gift Clause of the Arizona  
30 Constitution. Staff is confident that this case law was considered by the Town Attorney in reaching  
31 his conclusion that the Town cannot legally fund the investment. Further, there is nothing in the  
32 record that would indicate that the Town could legally fund the investment. If the Town is legally  
33 prohibited from funding the improvements, allowing recovery of this investment may be the only

---

34 <sup>40</sup> Ex. A-29 at 1-2.

1 option available to bring the water system up to Uniform Fire Code standards.

2 Staff acknowledges that the Company's fire flow improvement plan requires a major  
3 investment and overhaul of the Company's water system. Staff recommends including prudently  
4 incurred costs for fire flow plant that is used and useful because the investment is necessary to  
5 comply with a Town ordinance. Moreover, fire flow plant is in the public interest because it will help  
6 protect life and property.

7 **3. Staff is not aware that the Commission has disallowed the**  
8 **inclusion of fire flow investment that is used and useful in**  
**any prior decisions.**

9 Staff is aware of no previous Commission decision which has denied a water company's  
10 request for recovery of its investment in fire flow improvements. Indeed, recent Commission  
11 decisions recognize that this is an important public safety issue which must be addressed.

12 In Arizona-American's most recent rate case before the Commission,<sup>41</sup> the Commission  
13 ordered the Company to form a fire-flow task force. The task force was to include representatives of  
14 the Company's Arizona management team, representatives from Youngtown and Sun City, a  
15 representative from the Sun City's Taxpayers' Association, a representative of the Recreation Centers  
16 of Sun City, and representatives from the fire departments serving Youngtown and Sun City. The  
17 purpose of the task force was to determine whether water production capacity, storage capacity, water  
18 liens, water pressure, and fire hydrants in these communities are sufficient to provide the fire  
19 protection capacity desired by each community. Decision 67093 at 31.

20 **3. Backup Pumping Equipment Should Be Included in Rate Base at**  
21 **This Time.**

22 In his direct testimony, Staff witness James Dorf recommended excluding certain pumping  
23 equipment from rate base at this time.<sup>42</sup> The pumping equipment was plant held for future use as  
24 backup in case existing pumps went down. Mr. Dorf recommended exclusion because the Company  
25 had not provided any evidence that the equipment was used in over ten years, and had not provided a  
26

27 <sup>41</sup> *Re Arizona-American Water Company, Inc.* Docket Nos. WS-01303A-02-0867 et al., Decision 67093  
28 (June 30, 2004).

<sup>42</sup> Ex. S-1 at 4:3-6.

1 definitive plan for its use.<sup>43</sup>

2 RUCO also recommended excluding the pumping equipment from rate. RUCO witness  
3 Timothy J. Coley testified that RUCO's recommendation was based on RUCO's determination that  
4 the pumping equipment was not used and useful.<sup>44</sup>

5 In his rebuttal testimony, Company witness Joel Reiker testified that the pumping equipment  
6 was used as back up for Well No. 16 during the test year.<sup>45</sup> Mr. Reiker also testified that the pumping  
7 equipment held for future use "reduce[s] the possibility of a significant interruption in the summer."<sup>46</sup>

8 Staff witness Steve Olea testified that the pumping equipment is used and useful because it  
9 served as backup during the test year.<sup>47</sup> Mr. Olea explained that holding the equipment as backup is  
10 useful because of the size of the wells and the pumps.<sup>48</sup> He also testified that retaining backups on  
11 site is useful to ratepayers because of the time it would take to get replacements. Mr. Olea stated that  
12 if a well went down, the Company could get it up and running again very quickly with backup  
13 equipment already on site.<sup>49</sup>

14 Staff witness James Dorf changed his original recommendation. He now recommends  
15 including the equipment in rate base because of Mr. Olea's determination that the equipment is used  
16 and useful.<sup>50</sup> However, Mr. Dorf further recommends that the equipment be transferred from the  
17 account for plant held for future use to the appropriate plant account.<sup>51</sup>

18 RUCO witness Timothy Cooley testified that when he wrote his testimony the Company  
19 stated that the equipment was not being used.<sup>52</sup> Mr. Cooley did not address Mr. Reiker's rebuttal  
20 testimony. Mr. Cooley also did not offer a position on how often backup equipment must be used to  
21

22 <sup>43</sup> *Id.*

23 <sup>44</sup> Tr. at 367:2-16. Note that Staff's original adjustment was for \$138,682 (*see* Ex. S-1 at 4), but RUCO's  
24 adjustment was for \$130,857 (*see* Schedule TJC-2, *cf.* R-8 at 4:20-21, putting the adjustment at

25 <sup>45</sup> Ex. A-15 at 7:10-12.

26 <sup>46</sup> *Id.* at 7:21-23.

27 <sup>47</sup> Tr. at 382:10-22.

28 <sup>48</sup> *Id.* at 381:12-24.

<sup>49</sup> *Id.*

<sup>50</sup> Tr. at 479:16-21.

<sup>51</sup> *Id.* at 479: 21-24.

<sup>52</sup> Tr. at 370:3-117.

1 be considered used and useful.<sup>53</sup> Finally, Mr. Cooley did not offer a RUCO position on whether  
2 backup equipment could be considered used and useful if it could prevent service disruptions to  
3 residential customers.<sup>54</sup>

4                   **4. The Ratepayers' Share of the After Tax Gain on the Sale of Land**  
5                   **Should Be Refunded Through a Surcredit and Amortized Over a**  
6                   **Three-Year Period.**

7           In its Application, the Company proposed to share 50% of the after tax gain on the sale of  
8 land with ratepayers.<sup>55</sup> The Company proposed to refund the 50% share with a surcredit amortized  
9 over a five-year period.<sup>56</sup> Staff witness James Dorf accepted the surcredit mechanism and proposed a  
10 three-year amortization period,<sup>57</sup> which the Company accepted.<sup>58</sup>

11           RUCO agreed with the 50% share, but recommended the sharing on a pre tax basis rather than  
12 after tax. RUCO also recommended that the Company create a deferred liability account for the pre  
13 tax amount rather than use a surcredit mechanism. RUCO explained that the amount in the account  
14 could then be amortized over a five-year period. The deferred liability account would also reduce  
15 rate base.<sup>59</sup>

16           RUCO argued that sharing on an after tax basis does not compensate ratepayers for the time  
17 value of money. It also argued that use of a surcredit mechanism is inappropriate because the  
18 Company is not entitled to earn a return on the gain.<sup>60</sup>

19           Staff witness James Dorf testified that Staff's position attempted to minimize any effect for  
20 the time value of money. For example, Staff recommended a three-year amortization period rather  
21 than the Company's proposed five-year period. Mr. Dorf further explained that Staff's  
22 recommendation is a simpler and more appropriate method of refunding ratepayers' share of the  
23 gain.<sup>61</sup>

<sup>61</sup> Tr. at 481:10-481:1; 483:7-15.

1 Moreover, the surcredit mechanism appropriately recognizes the net tax effect of the gain on  
2 the revenue requirement. Mr. Dorf testified that “[a]s you reduce the revenue, you would amortize  
3 the surcredit and there would be no tax impact at that point. They would match.”<sup>62</sup>

4 **5. The Arsenic Cost Recovery Mechanism Provides Sufficient Due**  
5 **Process for Including Arsenic Remediation Projects in Rate Base**  
6 **for the Step One Surcharge**

7 In its Application, the Company requested approval of an ACRM.<sup>63</sup> Staff recommended  
8 authorization of the ACRM.<sup>64</sup> The ACRM would provide for a surcharge mechanism to recover  
9 capital expenditures for remediation projects. The Company’s proposal is similar to the ACRM  
10 approved for Arizona Water Company in Decision No. 66400.<sup>65</sup> In addition, the Company’s  
11 proposal is not materially different from the ACRM approved for its other districts in Decision No.  
12 68310.<sup>66</sup> Staff Witness Igwe’s recommendations with respect to the ACRM are addressed at page 22  
13 of his testimony.<sup>67</sup> The ACRM would include an application for a Step One Surcharge no later than  
14 July 1, 2006.<sup>68</sup>

15 RUCO witness Rodney L. Moore expressed concern with the proposed ACRM. Mr. Moore  
16 testified that the review timeline for the Step One Surcharge is insufficient for a thorough audit and  
17 analysis of the proposed filing.<sup>69</sup> Mr. Moore also questioned whether the remediation project was  
18 oversized and had uses other than arsenic treatment.<sup>70</sup> For example, Mr. Moore questioned whether  
19 additional storage was necessary for arsenic treatment.<sup>71</sup> Finally, Mr. Moore testified that RUCO’s  
20 understanding of the review process is that it will require more “than a mere Open Meeting.”<sup>72</sup>

21 Staff witness Steve Olea testified about Staff’s view of the audit and review process for the  
22 proposed filing of the Step One Surcharge. Mr. Olea testified that the Company would first submit

28 <sup>67</sup> *Id.*

<sup>68</sup> *Id.*

<sup>69</sup> Ex. R-5 at 33:9-34:14.

<sup>70</sup> *Id.* at 33:9-23.

<sup>71</sup> *Id.*

<sup>72</sup> Ex. R-6 at 31:23-28.

1 required documentation. Next, Staff Engineering would inspect the plant covered by the ACRM, and  
2 Staff accountants would audit the costs. Staff would then draft a Staff report and recommended order  
3 that would go to an Open Meeting. Although the process would be quick, Mr. Olea stated that Staff  
4 would conduct a very thorough and complete investigation and analysis.<sup>73</sup>

5 Mr. Olea also testified that due process would be provided to all interested parties. He  
6 explained that all parties would have an opportunity to provide comment at the Open Meeting.  
7 Finally, Mr. Olea testified:

8 [T]he way Staff sees [the due process] is [that] the Commission would  
9 have four choices, which are the same four choices they have with any  
10 recommended order that comes before them. And that would be they  
could approve as is, they could amend it and approve it, they could  
deny it, or send it back to a hearing.<sup>74</sup>

11 Thus, the proposed ARCM process provides sufficient due process.

12 **B. Revenue Requirement Issues**

13 **1. Staff Recommends that the Commission Adopt an Annual Revenue**  
14 **Requirement of \$5,333,359 and Annual Operating Expenses of \$3,689,911.**

15 As stated in the section on rate base, the Company and Staff are in agreement on an adjusted  
16 rate base of \$14,412,903. The Company proposes an annual revenue requirement of \$5,511,451  
17 based on a ROR of 7.84%.<sup>75</sup> The Company also proposes operating expenses in the amount of  
18 \$3,725,260.<sup>76</sup> The Company calculated its current ROR at 6.00%. The Company's proposed revenue  
19 requirement and operating expenses would result in an 8.51% increase in revenue over test year  
20 revenues.<sup>77</sup>

21 Staff proposes a revenue requirement of \$5,333,359 based on a ROR of 7.24%.<sup>78</sup> Staff  
22 proposes operating expenses in the amount of \$3,689,911.<sup>79</sup> Staff calculates the Company's current  
23 ROR at 6.15%. Staff's proposed revenue requirement and operating expenses would result in a  
24

<sup>79</sup> See *id.* at 3.

1 5.00% increase in revenue over test year revenues.<sup>80</sup> The only remaining dispute between Staff and  
2 the Company is for rate case expense.<sup>81</sup> Staff also disagrees with RUCO's proposal to exclude rate  
3 case expense related to fire flow projects.

## 4                   2.       Return on Equity

### 5                   a.       The Staff's return on equity determination is consistent with prior 6                   determinations of the Commission and with long-standing 7                   regulatory precedent

8           Staff is recommending a capital structure for Arizona-American PV of 63.3% debt and 36.7%  
9 equity.<sup>82</sup> The Company and RUCO agree with this capital structure.<sup>83</sup> Staff is, however,  
10 recommending that Arizona-American PV be required to attain and maintain a capital structure with  
11 an equity/debt ratio of 40/60.<sup>84</sup> The average capital structure for Staff's sample water utilities is  
12 comprised of approximately 50.9 percent debt and 49.1 percent equity.<sup>85</sup>

13           The parties cannot agree on the appropriate return on equity for the Company. Staff and  
14 RUCO both used long-standing methodologies approved and utilized by the Commission and are  
15 recommending ROEs of 10.4% and 10% respectively.<sup>86</sup> The Company, on the other hand, is using a  
16 novel methodology not widely utilized to attain a 12.0% ROE.

17           Staff's ROE determination is consistent with prior determinations of the Commission and  
18 with long-standing regulatory precedent.<sup>87</sup> Staff's ROE determination uses methodologies that have  
19 been utilized by regulatory agencies for years and are widely accepted.

---

20 <sup>80</sup> See *id.* at 1.

21 <sup>81</sup> But see *id.* at footnote A.2 (The Company's post-hearing schedules erroneously included an addition of  
22 \$2,153 for miscellaneous allocated corporate expense, rather than a deduction. The net effect is a  
23 difference of \$4,306.).

<sup>87</sup> See *In the Matter of the Application of Chaparral City Water Company*, Docket W-02113A-04-0616,  
Decision 68176 (Sept. 30, 2005); *In the Matter of the Application of Rio Rico Utilities Inc.*, Docket No.  
WS-02676A-03-0434, Decision 67279 (Oct. 5, 2004); *In the Matter of the Application of Valley Utilities  
Water Company, Inc.*, Docket No. W-01412A-04-0736, Decision 68309 (Nov. 14, 2005); *In the Matter of  
the Application of Bella Vista Water Co., Inc.*, Docket No. W-02465A-01-0776, Decision 65350 (Nov. 1,  
2002).

1 By contrast, the Company's proposed methodology would be a break with that long-standing  
2 precedent. Indeed, the Company's cost-of-capital consultants have been mostly unsuccessful in  
3 gaining regulatory approval of the methodology in the United States and Canada. The methodology  
4 has been rejected or not adopted by every state commission with the exception of one and by the  
5 Federal Energy Regulatory Commission. And most regulatory bodies outside of the United States.<sup>88</sup>  
6 The only state commission that the Company states has adopted its particular methodology has been  
7 the Missouri Public Service Commission..

8 The Staff's ROE is based on cost of equity estimates for Paradise Valley that range from  
9 10.2% to 10.6% (inclusive of a 0.6 percent financial risk adjustment).<sup>89</sup> The Staff used two market-  
10 based models to estimate the cost of equity: the discounted cash flow ("DCF") model and the Capital  
11 Asset Pricing Model ("CAPM").<sup>90</sup> Staff chose these models because they are widely recognized and  
12 accepted as appropriate models to estimate cost of equity and the Commission has consistently relied  
13 upon their results.<sup>91</sup> Staff used two versions of the DCF model: the constant-growth DCF Model and  
14 the multi-stage or non-constant growth DCF.<sup>92</sup> Staff's constant growth DCF estimate was 9.7% and  
15 its multi-stage DCF estimate was 9.4% producing an overall DCF estimate of 9.6%.<sup>93</sup>

16 Staff then used the same sample companies to compute the CAPM to estimate Arizona-  
17 American PV's cost of equity.<sup>94</sup> Staff's overall CAPM estimate was 10.0%.<sup>95</sup> Staff's average  
18 estimate of the cost of equity under both methodologies for the sample water utilities was 9.8%.<sup>96</sup>  
19 Staff then quantified the effect of Arizona-American PV's capital structure on the cost of equity.<sup>97</sup>  
20 Because Arizona-American PV's capital structure is more highly leveraged than the sample water  
21 utilities capital structure, its stockholders bear additional financial risk. As a result, its cost of equity  
22

<sup>92</sup> *Id.* at 14:20-23.

26 <sup>93</sup> *Id.* at 24-26.

<sup>94</sup> *Id.* at 27:17-18.

27 <sup>95</sup> *Id.* at 31:14.

<sup>96</sup> *Id.* at 34.

28 <sup>97</sup> *Id.*

1 is higher than that of the water companies in Staff's sample.<sup>98</sup> Staff used the methodology  
2 developed by Professor Robert Hamada to estimate the effect of Arizona-American PV's capital  
3 structure on its cost of equity.<sup>99</sup> Staff calculated a financial risk adjustment of 60 basis points.<sup>100</sup>  
4 Staff's adjusted ROE is 10.4%<sup>101</sup>

5                   **b. The return on equity recommendation of the Staff is at the high-**  
6                   **end of the returns on equity authorized by state commissions for all**  
7                   **of the Applicants' subsidiaries.**

8           The ROE that Staff is recommending exceeds the average and median authorized RORs for  
9 all of Arizona-American's operating subsidiaries. The average ROR of all of its subsidiaries at this  
10 time is 10.12%. The median ROR on equity is currently at 10.09%. In this proceeding, the  
11 Company complains that the most recent ROEs on equity authorized by the Commission for other  
12 Arizona-American operating districts are at the lower end of the range that has been authorized for its  
13 subsidiaries throughout the United States. However, the Staff's ROE recommendation would put the  
14 Arizona-American PV water district in the upper range of authorized ROEs for its other subsidiaries  
15 nationwide. This result is demonstrated in the following chart taken from Ex. S-12 at 2:

<u>State</u>	<u>Effective Date</u> <u>of Order</u>	<u>Requested ROE</u>	<u>Granted ROE</u>
Arizona-American	06/30/04	11.50%	9.00%
Indiana Water Co.	11/18/04	11.00%	9.25%
Etown Water Co.	02/18/04	11.25%	9.75%
New Jersey Water Co.	02/18/04	11.25%	9.75%
Calif. Sacramento	04/16/04	11.00%	9.79%
West Virginia Water	01/07/05	10.60%	9.85%
Ohio Water Co.	02/25/05	11.00%	9.88%
Kentucky Water Co.	12/01/04	11.20%	10.00%
Missouri Water Co.	04/16/04	11.00%	10.00%
Calif. LA Division	09/23/04	10.70%	10.04%
New Mexico Water Co.	12/12/03	11.15%	10.08%
Calif. Coronado Village	01/01/05	10.50%	10.10%
New York (Long Island)	03/30/05	11.00%	10.10%
Virginia Water Co.	09/17/04	11.00%	10.10%
Calif. Monterey	02/23/03	10.68%	10.26%
Illinois Water Co.	08/12/03	11.02%	10.27%

98 *Id.*

99 *Id.*

100 *Id.*

101 Ex. S-3 at 35:10-11.

1	Iowa Water Co.	02/21/02	11.33%	10.45%
	Maryland Water Co.	07/27/00	10.52%	10.52%
2	Hawaii Water Co.	04/19/04	10.90%	10.60%
	Pennsylvania Water Co.	01/16/04	12.00%	10.60%
3	Tennessee Water Co.	03/09/05	10.70%	10.70%
	St. Louis County Water Co.	04/18/01	12.00%	10.75%
4	PV	08/01/99	11.00%	11.00%

5 It is obvious from this chart that the Company's current 11.00% ROE set back in 1999, is  
6 higher than any of its other operating subsidiaries. The next highest ROR is 10.75% for St. Louis  
7 Water Co. set back in 2001. None of Arizona-American's operating subsidiaries have an authorized  
8 ROE of 12% as the Company is recommending in this proceeding.

9 **c. The Applicant's proposed return on equity calculation suffers from**  
10 **several significant flaws which would lead to an inflated ROE in**  
11 **this case.**

12 As Staff Witness Rogers points out in his testimony, there are several serious flaws with the  
13 Applicant's novel approach. First, the empirical capital asset pricing model is erroneously based on a  
14 market value capital structure instead of a book value capital structure.<sup>102</sup> Staff Witness Rogers  
15 pointed out the problem with Dr. Kolbe's approach in the following passage from his direct  
16 testimony:

17 Use of a market value capital structure to estimate the cost of equity is  
18 predicated on the underlying erroneous logic that the Commission is  
19 obligated to maintain stock prices and perpetuate an ongoing rising  
20 spiral between revenues and stock prices. As previously discussed,  
21 expected returns in excess of the cost of equity cause market values to  
22 exceed book values. Increasing revenues, in turn, increases market  
23 values resulting a perpetual upward cycle.<sup>103</sup>

24 Second, Staff witness Rogers pointed out that several studies show that using a combination  
25 of growth projections is superior to the sole reliance on analysts' forecasts.<sup>104</sup> Staff's ROE  
26 determination is the product of a more balanced approach that included both analysts' forecasts and  
27 historic growth.<sup>105</sup> The Commission has not favored the use of analysts' forecasts alone, finding that

28 <sup>102</sup> Ex. S-3 at i.

<sup>103</sup> *Id.* at 37:3-8.

<sup>104</sup> *Id.* at 39:3-6.

<sup>105</sup> *Id.*

1 they were overstated.<sup>106</sup>

2 Staff witness Rogers presented a dramatic illustration of the difference between using only  
3 projected earnings per share as Dr. Vilbert does as opposed to using historical numbers as well:

4 That is, the growth estimates for historical dividends, projected  
5 dividends and historical earnings per share are 2.6 percent, 4.7 percent  
6 and 3.5 percent, respectively, a fairly close knit group. On the contrary,  
7 Staff's growth estimate based on the projected earnings per share  
8 method preferred by Dr. Vilbert is 14.1 percent, a wide variance from  
9 the other three estimates.<sup>107</sup>

10 Third, Staff witness Rogers also pointed out that under the Market-Value Capital Structure  
11 methodology advocated by Dr. Kolbe, the cost of equity is dependent upon the cost of debt.  
12 Another problem noted by Staff witness Rogers is that the cost of debt used by the Company's  
13 experts are historical and does not reflect current costs.

14 **3. Staff Recommends Rate Case Expense in the Amount of \$208,700,**  
15 **including a 50/50 Sharing of Expense for the Company's Cost-of-Capital**  
16 **Consultants.**

17 The Company proposed a total of \$282,841 in rate case expense in its direct testimony.<sup>108</sup>  
18 Company witness Stacey A. Fulter originally proposed to only include 50% of rate case expense for  
19 the Company's cost-of-capital consultants.<sup>109</sup> Ms. Fulter testified that cost-of-capital expenses were  
20 reduced by 50% because the Company's investors and ratepayers equally benefit by the cost-of-  
21 capital testimony.<sup>110</sup> The Company estimated the expenses at \$158,767, and included only \$79,383  
22 in rate case expense.<sup>111</sup>

23 Prior to filing its direct testimony, Staff received a revised estimate of rate case expense in the  
24 amount of \$301,832.<sup>112</sup> In his rebuttal testimony, Company witness Thomas M. Broderick also  
25 reversed the Company's position on sharing cost-of-capital expenses. The Company now seeks full  
26

27 <sup>106</sup> *In the Matter of the Application of Arizona Water Company, an Arizona Corporation, for Adjustments to*

<sup>110</sup> *Id.*

<sup>111</sup> *Id.*

<sup>112</sup> *Id.* at 10.

1 recovery for its cost-of-capital consultants.<sup>113</sup>

2 Staff recommended a decrease of \$74,141 from the Company's original proposal of  
3 \$282,741.<sup>114</sup> Staff's recommended rate case expense is presented in Schedule AII-9 of Exhibit S-6.  
4 Staff also reviewed the Company's revised estimate of rate case expense. Staff continues to support  
5 its determination that the proper level of rate case expense is \$208,700.<sup>115</sup> Additionally, Staff  
6 believes that the Company's revised estimate of time required for its cost-of-service witness was  
7 excessive.<sup>116</sup>

8 Staff's recommended level of rate case expense still recognizes a 50/50 sharing between  
9 investors and ratepayers for cost-of-capital expenses. Staff witness Alexander Ibhide Igwe testified  
10 that the original amount of \$158,767 for cost-of-capital consultants is excessive.<sup>117</sup> Company witness  
11 Thomas Broderick justified the Company's changed position for full recovery by testifying that:

12 The Company must presently rely upon the best available expertise in  
13 light of the low 9% return on equity granted in our most recent Arizona  
14 rate cases, which placed Arizona American Water last among all the  
state affiliates of American Water.<sup>118</sup>

15 Staff believes that the Company's justification is misplaced. Mr. Igwe testified that:

16 While Staff recognizes the Company's right to engage the services of  
the best consultants, it appears reasonable to share the related costs  
17 when the Company's cost of capital witness, the Brattle Group,  
primarily argues for a higher than normal cost of equity.<sup>119</sup>

18 At hearing, Staff also presented an exhibit comparing the ROE of the Company's affiliates. The  
19 average ROE authorized for the Company's affiliates is 10.12%, and the median ROE is 10.09%.<sup>120</sup>  
20 Staff's recommended ROE in this proceeding is 10.4%.<sup>121</sup> Finally, Staff witness Darron W. Carlson  
21 testified that "[s]taff strongly believes that the benefits of the cost of capital portion of rate case  
22 expenses flow to both investors and ratepayers."<sup>122</sup>

<sup>121</sup> Ex. S-15 at 1.

28 <sup>122</sup> Ex. S-8 at 7:19-20.

1                   a.       **The Commission Should Reject RUCO's Argument that Rate Case**  
2                               **Expense Should Not Include Costs for Requesting Recovery of Fire**  
3                               **Flow Improvements.**

4       RUCO witness Rodney L. Moore justified RUCO's proposed level of rate case expense in  
5 part on a legal argument related to fire flow improvements. Mr. Moore testified that rate case  
6 expense should not include costs for requesting recovery of fire flow improvements.<sup>123</sup> Mr. Moore  
7 cited Commission Decision No. 67093 in support of its position.

8       In Decision No. 67093, RUCO argued "ratepayers should not be charged for the Company's  
9 choice to incur the expense necessary to present the unorthodox argument, and that the amount of  
10 allowable rate case expense should therefore be reduced."<sup>124</sup> Mr. Moore testified that the request for  
11 recovery of fire flow improvements is an "unorthodox argument about [a] discretionary item."<sup>125</sup> He  
12 also claimed that RUCO's position is consistent with the holding in Decision No. 67093.<sup>126</sup>

13       Staff does not believe that a request for recovery of fire flow improvements is an "unorthodox  
14 argument." Water utilities throughout Arizona include items in rate base that improve fire flows, e.g.  
15 fire hydrants and sizing of pipe to support flows to fire hydrants. Staff witness Steve Olea  
16 specifically testified "fire flow is not unusual for a water company to include in its service or rates or  
17 rate base."<sup>127</sup> He also testified "every water company that has a fire hydrant has fire flow included in  
18 rates."<sup>128</sup>

19       Furthermore, RUCO's reliance on Decision No. 67093 is misplaced. The legal argument at  
20 issue in that decision was a request to deviate from the "Commission's long-standing formula for  
21 determining revenue requirement."<sup>129</sup> A request for recovery of fire flow improvements is not  
22 comparable to a request to deviate from a long-standing ratemaking methodology.

<sup>128</sup> *Id.* at 537:10-11.

<sup>129</sup> Decision No. 67093 at 19.

#### 4. Rate Design Issues

##### a. Rate Design Overall

Staff generally concurs with the Company's rate design.<sup>130</sup> The Company has a conservation-type rate design with no gallons included in its base rates and three-tier inverted block commodity rates. Staff proposes no changes to rate design with the exception of the Mummy Mountain acquisition, where Staff is proposing to align them with the rates charged for other ratepayers.<sup>131</sup>

##### b. Staff offered two alternate recommendations for including fire flow investment in rates; both of which have a minimal impact upon the average or median residential customer bill.

The Company originally proposed the use of separate surcharges to recoup its investment in fire flow improvements. Staff's position, offered by witness Carlson, opposed the use of a separate surcharge by the Company to recoup this investment.<sup>132</sup>

Staff's position is that a separate surcharge is unnecessary because the Commission already approved an Accounting Order for the Company which allows the Company to accrue a post-in-service allowance for funds used during construction on PFS plant investments until the related plant is placed in rate base and rates are established on that rate base.<sup>133</sup> Through this post-in-service AFUDC, the Company will be compensated for the time value of its money until the plant is placed in rate base and reflected in rates.<sup>134</sup>

In addition, Staff recommended use of the Company's proposed high-block usage surcharge to fund PFS plant investments. Staff, however, simplified the Company's surcharge in the following manner: a residential surcharge rate of \$2.15 per 1,000 gallons for all usage in the third tier and a commercial surcharge rate of \$2.15 per 1,000 gallons for all usage in the second tier.<sup>135</sup> Staff estimates that this surcharge could produce approximately \$1.7 million per year.<sup>136</sup> The funds collected through the surcharge would be classified as CIAC, directly offsetting the PFS investments

1 of the Company thereby minimizing the post-in-service AFUDC accruals.<sup>137</sup>

2 Given the Company's position in its reply testimony that Staff's proposal could result in a  
3 delay in funding the fire flow project and given the Town's desire to have the improvements  
4 completed in five years, Staff later offered an alternative proposal for a separate surcharge, in the  
5 event the Commission ultimately believes that a surcharge is appropriate.<sup>138</sup> Staff's alternative  
6 proposal would allow the Company to increase the high block additive surcharge from \$2.15 to \$3.15  
7 per 1,000 gallons effective October 1, 2007.<sup>139</sup> In addition, a new "Public Safety" additive surcharge  
8 of \$1.00 per 1,000 gallons to the second tier residential rate and a new "Public Safety" additive  
9 surcharge of \$1.00 per 1,000 gallons to the first tier of commercial rate would also begin on October  
10 1, 2007.<sup>140</sup> Staff estimates that implementation of the October 1, 2007 increases would generate an  
11 additional \$1.8 million annually for a total of \$3.5 million annually. These surcharges would have  
12 no impact upon the average (22,193) residential bill or the median (11,500) residential bill because  
13 the surcharge for the second tier residential starts at 25,000 gallons.<sup>141</sup>

14 Finally, whatever alternative the Commission adopts with respect to fire flow, Staff  
15 recommends modification of the authorized AFUDC methodology granted in Decision No. 68303.<sup>142</sup>  
16 The surcharge collections should be a deduction for purposes of calculating the balance to which the  
17 AFUDC fire flow rate is applied.<sup>143</sup>

18 RESPECTFULLY SUBMITTED this 5<sup>th</sup> day of May 2006.
